**Subject:** Cummins SCR related Defect report ADR 2010-05  
**Date:** 03/16/2010 10:18 AM

---

Victor,  
We just received the above DR which involves a problem with SCR technology. As you may already realize my management is very interested in the implementation of SCR.

Under the Defect Description your DR states that the algorithm to detect incorrect DEF "does not operate as described in the AECD". As always, we need enough of a description here to at least understand the basic defect and this doesn't provide it. Please answer the obvious question, How does the defective system operate and what's different from the information provided ?

Given the interest in SCR implementation and the importance of properly detecting incorrect DEF as agreed upon per the certification application we want to make sure the Recall you have committed to is carried out as expeditiously as possible. Please let us know the schedule for Recall implementation including the date when the first owners will be notified to bring their vehicles in for repairs.

Thanks,  
Cliff
